Nigh helps local businesses connect with and get more customers to nearby. Nigh helps customers discover great local opportunities nearby that are happening soon.

Merriam-Webster.com Definition of 'Nigh': Near in location, time, or relationship

Nigh's Definition: Connecting local businesses with customers near in location, time, and relationship

Our Mission/Why: Revolutionize local commerce to make local businesses more profitable and lift up people in local jobs. Our solution needs to restore society's trust in technology, corporate values, and leadership. We need to build systems that lift more people up and not step on them for the profits and wealth of few. We can't afford to continue to build 1%er technologies that increases the division in society.

Our Core Values:

- **Local first.** Social impact, compassion for people in local jobs that serve our community, use our skills in service to people in local jobs, supporting each other, neighbors and our local community. Building the economy from a strong bottom-up and not top-trickle-down philosophy, Put Main Street before Wall Street. No 3rd party ads (local businesses are our customers, not national advertisers). Fighting warrior spirit for local people. Prioritize local autonomy, empowerment, and governance. Our service and sacrifice is for the mission to help local businesses.
- **Succeed together.** We are all in this together, share in the sacrifices, successes, and prosperity of the journey, lift more people up as we go, equal access and opportunity, strive to be more inclusive, equality/diversity, put people before profit, less centralized power/wealth is good for society, optimism towards a more inclusive and balanced globally technologically-advanced society, we are all in this together! Lead with humility. Technology and business models are bad if they divide us. More economic opportunity for everyone through our technology.
- **Do the right thing.** Lead with integrity, courage, and empathy. Do the right thing even when it's really hard and even if it has a potential impact on the short-term financial results, prioritize quality before quantity, and focus on respect, trust, transparency, and positive intent. "Caskets and Urns don't have wallets" - we are here to make a positive difference and make the world a better place. Long-term progressive thinking, not short-sighted share-price thinking. With great power comes great responsibility.
- **Be accountable.** Own it. Trust/Accountability/Responsibility/Authenticity. Hold ourselves and others accountable for high standards, high quality, high performance, and continuous improvement. Take ownership of mistakes to learn and grow from them. Don't hide from responsibility or challenging situations. Prioritize people's health & safety and choice of privacy. Be kind, forgive self and others. Real human identity (one human per user account) is important to enforcing accountability.
- **Innovative Excellence.** Sustainable innovation for social and environmental good, strive to do more with less, resilience, embrace doing really challenging things (Everest) to

Nigh

change the world in a positive way, determination, curiosity, dream big, be a leader of innovation, have grit and take risks, world-class performance and expectations, world-class innovation and engineering

Our solution needs to:

- **Share in prosperity** - create local jobs, uplift people in local jobs, and focus on making local businesses more profitable
- **Codify trust in our technology, services, and company** - be fair, transparent, enforce quality and accountability to our values timely and consistently
- **Diversity and Innovation** - provide a platform for diversity, equal opportunity, and inclusiveness
- **Data & privacy responsibility** - protect all community members privacy and data and give community members the power of choice about their privacy and how their data is shared
- **Sustainable technology for social good** - provide solutions for today and beyond that improve human quality of life and drive more equality

Our guiding principles:

- **Bottom-up Economics.** Economic structure should focus on driving value down to local participants and communities and reduce incentives that drive centralize wealth over time.
- **High Quality & High Trust.** Incentives participants to create and maintain a high quality local marketplace where all good standing participants feel the marketplace is safe and trustworthy.
- **Accountability.** Holds participants accountable for bad behavior and poor quality.
- **Highly secure.** Focus on access for only verifiable local participants. Prevent access of any non-locals and non-humans (ie no bots).
- **Local autonomy.** Every local community, the lowest level of governance, should have autonomy of their local marketplace.
- **Real human identity.** Real human identity matters to create high trust and high quality systems. Every human should have only one user account, every human's identity information should be accurate, and there should not be any non-human user accounts or fake user accounts.
- **Protect Privacy.** Protecting participant identity and data is critical. Provide a choice of how much identity participants want to reveal or require to reveal for local commerce transactions.

Nigh

High level solution questions:

How do we build a solution that offers the benefits of both a centralized system and decentralized system that can support the most efficient and highest quality local commerce in every city, town, and village in the world?

How do we balance maintaining enough control and governance to ensure high quality, high value and timely innovation while giving local communities more autonomy over their local marketplace?

How do we incentivize participants to drive and reinforce high quality and good behavior?

How do we collaborate with third party developers and POS providers to best serve local businesses and local consumers?

How do we build a system where the transaction costs go down with scale?

How do we incentivize participation of computer resources (computation & storage) based on the current size of the local node and future scalability requirements for each node?

What is the compensation structure for various third party participants involved?

How do we ensure that nobody abuses their access to local marketplace's data and access is restricted based on permission and need?

How do we ensure there is only one user account for each human and that that human can only access the marketplace from one gps-confirmed device at a time?

How do we design a system that can handle system performance requirements and is infinitely scalable based on the growing number of transactions per second and high density of each county and city (Node)? (ie quadratic sharding)

What is the best network design for broadcasting a significant volume of local offers in very high density cities at very high speeds across lots of apps? (ie UDP)

What does the best security framework look like to ensure location-driven access, local node security, and unique human identity?

How do we design a local commerce solution that is future-proof and only gets better over time?

Logos represent a small sample and are not an exhausted list. Local is very fragmented

Rebecca broadcasts via Nigh:

The diagram illustrates a central concept (represented by a blue shield icon with a person and a plus sign) connected to various mobile applications and services. The connections are as follows:

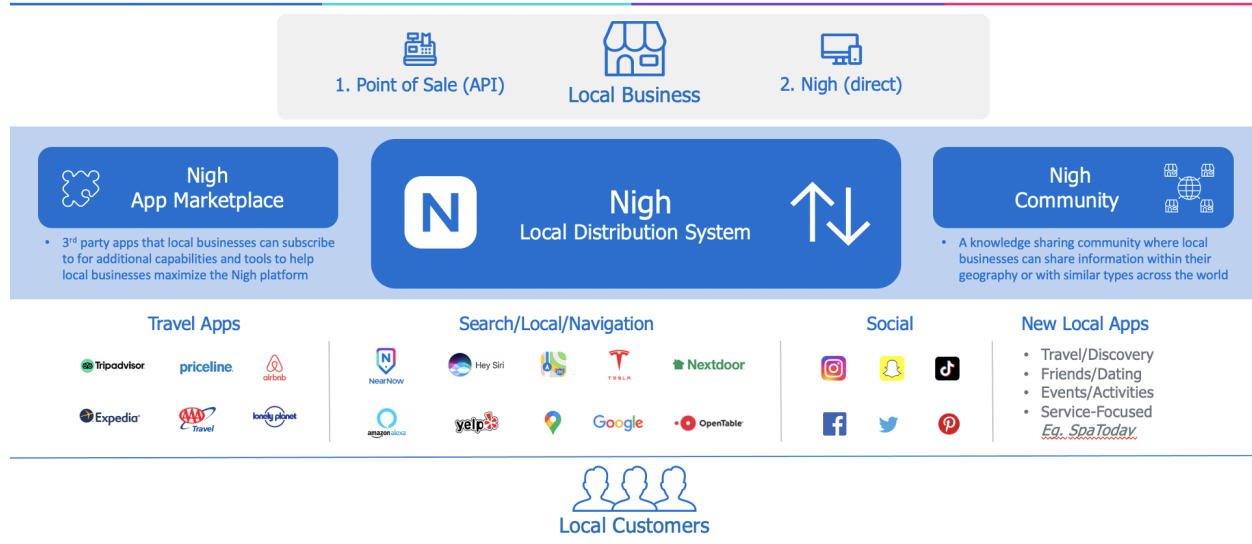

- Google Maps:** Shows a map of Boulder, CO, with a blue shield icon marking a location.
- facebook:** Shows a search for "Boulder" with a blue shield icon marking a location.
- Tripadvisor:** Shows a search for "Boulder" with a blue shield icon marking a location.
- yelp:** Shows a search for "Restaurants" in Boulder, CO, with a blue shield icon marking a location.
- tesla:** Shows a Tesla app interface with a blue shield icon marking a location.
- Hey Siri:** Shows a Siri interface with a blue shield icon marking a location.
- amazon alexa:** Shows an Alexa interface with a blue shield icon marking a location.
- Google Assistant:** Shows a Google Assistant interface with a blue shield icon marking a location.

A text box on the right contains the question: "Are there any Massage appointments available within 10 miles between 1pm and 4pm under \$50 today?"

Nigh

Nigh: The Local Commerce Platform

Why create the World's First Local Distribution System(LDS)?

Benefits of a Local Distribution System

- Real Time Dynamic Pricing based on Supply/Demand and Time
- Scalable, real time Local Inventory/Schedule/Availability Mgmt
- Increased Efficiency and Competitiveness in Local Commerce
- Personalization & Customer Segmentation Opportunities
- Faster Time To Market and more product differentiation opportunities
- Significantly larger market reach for local businesses
- Less expensive and more traceable results than marketing for local businesses
- Seamless integration for local commerce offer to cash to review
- Offer Bundling across multiple Local Businesses based on interests
- Data standardization and accessibility for AI and Machine Learning
- Best practice/process standardization for local commerce
